1. Introduction

- 1.1 Under Scheme rules, clause 9A, Trustees of the Mineworkers' Pension Scheme Limited, as the Trustee of the Mineworkers' Pension Scheme (the "Scheme"), is required to prepare a statement of the principles governing investment decisions. This document has been issued by the Trustee of the Scheme.
- 1.2 This Statement is produced in compliance with the Scheme Rules and not the Pensions Act 1995 (as amended by the Pensions Act 2004) since the Scheme is exempt from this provision of the Pensions Act. In particular, investment managers are not under a statutory duty to comply with this Statement, but their duties and obligations are set out in an Investment Management Agreement between each manager and the Scheme. Before drawing up this Statement and establishing the Scheme's investment arrangements, the Trustee has:
- had regard to the principles underlying the provisions of the Pensions Act and the Occupational Pension Schemes (Investment) Regulations 2005 concerning diversification and suitability of investments;
 - considered ongoing advice on the Scheme's investment arrangements and risk from Coal Pension Trustees Investment Limited (CPTI), the Trustee's investment adviser;
 - consulted with the Guarantor.
- 1.3 The Trustee will review this document regularly, at least every three years, and without delay after any significant change in investment policy. The Trustee will consult with the Guarantor whenever it intends to amend this Statement.
- 1.4 The Trustee will refer to this document where necessary to ensure that it exercises its powers of investment so as to give effect to the principles as set out in it as far as is reasonable.
- 1.5 Copies of this Statement have been given to the Guarantor, the Trustee's investment adviser and the Scheme Actuary. Copies are available to members of the Scheme on request, and a summary of key investment information is included in the annual report to members.

2. Governance arrangements

2.1 The Trustee has ultimate responsibility for decision-making on investment matters. In order to ensure that investment decisions are taken only by persons or organisations with the skills, information and resources necessary to take them effectively, the Trustee delegates some of these responsibilities.

Committee of Management (CoM)

2.2 The CoM fulfils the function of the Board of the Trustee. The appointments to a number of roles on the Board require the approval of the Guarantor and have to satisfy an objective set of criteria covering skills, knowledge and experience.

2.3 Whilst CoM takes ultimate responsibility for all investment decisions, those investment responsibilities which are retained directly by the CoM include, but are not limited to:

- Establishing a governance structure that ensures sufficient focus is devoted to investment matters and facilitates efficient investment decision making;
- Agreeing, as appropriate, suitable terms of reference for those groups within the governance structure, especially where authority to take and/or implement investment decisions has been delegated;
- Establishing the Trustee's investment objectives;
- Agreeing investment beliefs and key policies;
- Formulating a strategic investment framework which seeks to achieve the investment objectives;
- Establishing key metrics within the strategic investment framework, including return targets, income targets, liquidity constraints and diversification ranges;
- Setting the risk appetite within which the Scheme's investment strategy should be managed;
- Monitoring the Investment Sub-committee to ensure it operates in accordance with the agreed terms of reference;
- Monitoring performance of investments and taking steps to address shortfalls;
- Reviewing, as necessary, the content of this Statement in conjunction with the Scheme's advisors whenever it intends to amend it.

Investment Sub-Committee (ISC)

- 2.4 The Trustee has appointed an Investment Sub-committee, to which it has delegated certain investment decision-making and oversight responsibilities.
- 2.5 The ISC's remit as set out in separate Terms of Reference, is broadly to:-
- oversee the development of and make recommendations on the investment policies and strategy of the Scheme for approval, where relevant, by the CoM;
 - approve the annual investment plan including proposed directional asset allocation changes; and
 - oversee efficient implementation of the investment strategy, including monitoring of investment performance, costs and investment risk.

Coal Pension Trustees Services Limited (CPT)

- 2.6 CPT, a company owned jointly by the Scheme and the British Coal Staff Superannuation Scheme (BCSSS), acts as the Scheme's Executive and provides investment implementation, operational and risk management services to the Trustee and helps the Trustee deliver its strategic objectives on a day to day basis.

Coal Pension Trustees Investment Limited (CPTI)

- 2.7 CPTI, authorised by the Financial Conduct Authority (FCA), is responsible for providing investment advice and investment management services to the Trustee. CPTI's responsibilities and authorities are set out in an Investment Management Agreement with the Trustee.

Investment managers

- 2.8 The Trustee delegates responsibility for the day to day management of the assets to appointed investment managers. The investment managers are required to act in accordance with the objectives and restrictions set out in their Investment Management Agreements. These objectives and restrictions are designed to ensure that investments are appropriately diversified and suitable for the Scheme, and to ensure that the managers align their decisions with the Trustee's investment policies.

3. Investment objectives, beliefs, framework and strategy

Objectives

- 3.1 The Trustee's long-term bonus objectives are to deliver new bonus pensions throughout the future and to provide steady annual pension increases to all members in the future.
- 3.2 Consistent with this, the Trustee's primary investment objective is to maximise expected returns subject to risks remaining within tolerances that the Trustee establishes from time to time.

Investment Beliefs

- 3.3 The Trustee has agreed core beliefs that set out a clear view on investment philosophy. These beliefs, which are reviewed periodically, are used to inform the investment process and can be summarised as follows:
- i. To generate a long term sustainable real return, the focus should be on quality investments, bought (and ultimately sold) at the right price
 - ii. There are seldom any 'free lunches' in investment - to get return you need to take risk; successful investors don't avoid risk they actively seek it out
 - iii. MPS is a unique investor, investing according to its own needs. We will improve expectations of meeting our objectives by focusing on the future and leading, not following
 - iv. The ability to invest in complex and/or illiquid assets widens our opportunity set and is usually rewarded with extra net return over simpler/more liquid alternatives
 - v. Long-term investment success should come from a focus on sustainability. In particular, environmental, social and governance ('ESG') factors can have a material impact on long-term investment returns. They should be considered before any investment is made
 - vi. A strong governance structure with a well-informed governing fiduciary and an expert internal investment team gives MPS a competitive advantage over many other schemes

Strategic Investment Framework

- 3.4 The Trustee has established a framework that sets out the key principles for achieving the investment objectives and managing risks, as follows:
- **Investment return objective**, which is based on the annual returns required over the future to achieve the long term stretch bonus objectives.

- **Liquidity risk tolerance**, which recognises the need to sell assets to pay benefits and sets out minimum levels of liquidity required to mitigate the risk of permanent capital impairment and path of returns risk.
- **Headline diversification controls** for assets, recognising the requirement to generate returns but the need to avoid over-concentration of exposures.
- **Annual Investment Plans**, which set out the expected changes to asset allocations over the short term, recognising the market environment, emerging opportunities, changing risks and relative valuations.

Investment strategy

- 3.5 Within the framework, the Trustee sets specific parameters from time to time, including: -
- The minimum and target levels of annual income;
 - The period over which the liquidity risk tolerance should cover all benefits;
 - The triggers for using the liquidity portfolio to meet cash flow obligations;
 - The strategy on borrowing to meet short term cash flow needs;
 - Limits around the level of illiquid assets; and
 - Specific purpose category ranges.

4. Risk

- 4.1 The Trustee has an integrated approach to risk management, considering the assets, liabilities and the existence of the guarantee.
- 4.2 The Scheme has a UK Government guarantee covering some of the members' benefits. The Trustee considers the security afforded by the guarantee, the risks to those benefits not guaranteed, the returns required to deliver additional benefits to members and the views of the Guarantor, when formulating its investment strategy.
- 4.3 The primary liabilities of the Scheme are payments to members over many years into the future. The maturity of the Scheme means that the Scheme is significantly cash flow negative (the payments to members significantly exceeds the income from assets and any new contributions), which affects the Trustee's investment objectives and risks. Mortality and inflation are important risks to the liabilities. However, given the Scheme structure and the fact that the level of pension is directly affected by asset returns, the key liability risk is the returns on the Scheme's assets.
- 4.4 The Trustee recognises a number of risks involved in the investment of the assets of the Scheme and will continue to monitor these risks, making investment adjustments as appropriate. The high return target means that the Trustee invests in asset classes and markets with significant levels of risk. The nature of these can differ: market volatility, credit risk, currency and other risks. The key risks are described below.

Cash Flow and Liquidity

- 4.5 An important characteristic of the Scheme is the high level of regular payments out (as a proportion of the assets). Management of cash flows and the availability of liquidity is therefore an important risk.
- 4.6 The Trustee monitors the income received from different assets, the level and liquidity of its bond portfolios, and the actual and predicted cash flows to and from its private assets.
- 4.7 The Trustee manages this risk by targeting income-producing assets, collecting all income, by holding sufficient liquid low risk assets to cover expected cash flows for a significant future period, by having temporary liquidity facilities available, and by establishing a clear plan for managing cash flows during a market event.

Private assets and illiquidity

- 4.8 The high return target and the need to diversify sources of risk and return means that the Trustee invests in a number of private markets. The market for some of these investments may be restricted or illiquid.
- 4.9 The Trustee monitors the total level of private assets, assesses the risks to future cash flows, and sets clear allocation limits.

Market and Manager Risk

- 4.10 The Trustee invests assets primarily through externally appointed investment managers. Risks can arise through the markets and manager mandates in terms of credit losses on individual investments, changes in asset values due to market movements, or effects on cash flows to or from investments.
- 4.11 The Trustee monitors the implementation of the investment strategy in detail and manages this risk by having clear limits on allocations to different sources of risk, avoiding concentration of risk within individual asset classes and mandates.

Currency Risk

- 4.12 The Trustee invests globally, whereas the liabilities are entirely denominated in sterling. Investments denominated in currencies other than the base currency carry the risk of exchange-rate movements. The Trustee has a foreign exchange hedging policy, whereby exposures to foreign currencies are hedged. The Trustee monitors the policy and the risks that may arise to the market value and cash flows from both the policy and the underlying foreign investments.

5. Responsible Investment Policy

- 5.1 The Trustee has agreed a responsible investment policy, which defines its commitment to responsible investment and covers economic, social and environmental sustainability, the integration of environmental, social and governance (“ESG”) factors into investment analysis and decision making, and the stewardship of the Scheme’s investments. The Trustee’s view on sustainable investment and ESG are captured within one of its investment beliefs included in section 3.3 (v), which includes the view that “being a good steward of assets can lead to better risk adjusted returns”.
- 5.2 The Trustee’s fiduciary duty is to act in the best interests of the Scheme’s members and the Trustee’s long-term bonus objectives are to deliver new bonus pensions throughout the future and to provide steady annual pension increases to all members in the future. Sustainability is an important and evolving long-term trend which the Trustee believes can have a material impact on long-term investment risks and returns and thus achievement of the Trustee’s objective.
- 5.3 These responsible investment considerations can be broken down into the key strategic areas of environment, social and governance:
- Environment – particularly risks and opportunities related to climate change but also other areas such as pollution, natural resources, biodiversity and land use.
 - Social - human rights, labour rights, inequality and diversity, health and wellbeing.
 - Governance – how well the companies and assets invested in are run and overseen, with sufficient ownership rights and accountabilities.
- 5.4 The Trustee is a signatory to the United Nations Principles for Responsible Investment and its six principles are embedded in its Responsible Investment policy.
- 5.5 In addition, the Trustee has agreed a stewardship policy, which sets out the Scheme’s approach to stewardship, and describes how the Trustee undertakes stewardship across its asset pool. The Trustee supports and applies the UK Stewardship Code 2020 definition of stewardship as “the responsible allocation, management, and oversight of capital to create long-term value for clients and beneficiaries leading to sustainable benefits for the economy, the environment and society.” As with all areas of investment, stewardship is aligned with the Trustee’s fiduciary duty and improving investment outcomes. Stewardship can be an effective tool for both reducing investment risks and improving returns.
- 5.6 The Responsible Investment Policy and the Stewardship Policy are both published on the Scheme’s website.

6. Manager Monitoring and Implementation of Investment Strategy

- 6.1 The selection of investment managers is based on assessment of investment skill, taking into account beliefs, idea generation, portfolio construction, implementation and monitoring processes, resources and sustainability and governance practices.
- 6.2 Mandates are aligned to the strategic objectives of the Trustee. Performance expectations and investment guidelines are defined in Investment Management Agreements.
- 6.3 The Trustee monitors the investment managers' performance, compliance with the guidelines and ongoing alignment to the objectives. The primary focus is on performance over three years, five years and longer periods, consistent with the time horizon of the Trustee.
- 6.4 Investment management fees are aligned to the objectives for specific mandates. Fees paid are reviewed annually, as are execution and other investment costs.

7. Additional Policies

Additional Voluntary contributions (AVCs)

- 7.1 The Scheme has a number of members who paid AVCs into the Scheme to enhance their benefits at retirement. Members are able to select to invest their AVC payments in a number of fund products, managed by a third-party provider, including; Discretionary, Cash, UK Equity, Global Equity, International Equity, Fixed Interest, Index Linked, Property, and With Profits. In practice only two funds are currently selected by members; With Profits and Discretionary.
